**In Play Favourite Losing Strategy
No Recovery Approach Criteria**

- Stronger team playing at home had starting odds at 1.70 or lower to BACK in the match odds.
- Check Soccer-stats to check that the favorite 1st goal percentage is 65% or higher.
- Another good check is on games played at home to see that they have not conceded many goals at home, so on average not more than 2 goals, which you can check on flash-scores.
- What you are looking to identify is that the favorite who is losing was just unlucky to concede a goal and is in form enough to have a great chance of coming back to equalize.

2

**In Play Favourite Losing Strategy
Placing Trade No Recovery**

- When the home favourite goes behind by a goal in the first half of the game you would place a lay bet for your chosen stake on the non-favourite who is currently winning and then place a Back bet to cover the liability on the new score in the correct score, which would be the 0-1
- If the favourite responds by scoring a goal to equalize then you cash out for a decent profit.
- If the favourite does not respond you stay in the game until it ends or until your 0-1 score line covers your match odds loss.
- If the non-favourite scores another goal cash out for a loss that can be recovered over 4 successful trades.
