

Strong Home Team Strategy No Recovery Approach

Strong Home Team Strategy

No Recovery Approach Criteria

- Stronger team playing at home with odds at 1.70 or lower.
- Correct score 0-0 odds are at least 14.0 or higher
- Check Soccer-stats to check that the favorite 1st goal percentage is 65% or higher
- Check team news on Twitter for major changes especially in cup games, as we want the players scoring the goals to be playing and that the first team are playing.
- Another good check is on games played at home to see that they have not conceded many goals at home, so on average not more than 2 goals, which you can check on flash-scores.

Strong Home Team Strategy

Placing Trade No Recovery

- If you back the Strong Home Team and do not do the 0-0 bet in the correct score and stay in the trade until the favourite scores then cash out.
- If the Strong Home Team has not scored by the 70th minute then cash out for a loss, which would be lower than losing the whole stake and can be recovered across 3 successful trades.
- If the non-favourite weaker team scores in the first half then instead of doing a recovery just wait until the 70th minute for the favourite to respond, which is the most likely event and when they do then cash out for a small loss.
